PROJECTS:

Project 1: IT Skill Arena | Hanamkonda (Aug 2023 – March 2024)

Project Name : Training Institute Project.

Project Description:

The project is targeted to manage training institute. The project is divided into 4 modules: Staff, Admin, Super Admin and Student. The project is developed on **PHP** and **MySQL**. The user can login and user sessions are managed. The project has dashboard for admin, staff and student when they login. The current activity that the project can handle is Staff Management, Training Courses, Faculty, Fee Collection and Generation of timetable for the courses taught.

Project 2: CYE Technology Pvt. Ltd. | Hyderabad (Nov 2024 – Present)

Project Name : ZIKKII – Learning Application

Project Description:

The project was developed using React Native Expo (frontend), Node.js (backend), and MySQL (database). The application is designed for users to explore and learn different types of courses after successful payment. It features a user-friendly interface with a navigation bar, similar to modern mobile apps. Key functionalities include user authentication, course purchase and tracking, a progress bar for course completion, and seamless navigation across modules.

Project 3: CYE Technology Pvt. Ltd. | Hyderabad (Nov 2024 – Present)

Project Name : Home Service App

Project Description:

Developed a dual mobile application using React Native Expo (frontend), Node.js (backend), and MongoDB (database). The system includes two apps: one for users requesting home services and another for service providers. The user app allows customers to book services like gardening, cleaning, cooking, plumbing, electrical work, pest control, and more. Key features include live location tracking, service category selection, booking management, and real-time status updates. The service provider app allows professionals to manage their profiles, accept service requests, and update job status—both apps are fully integrated for real-time communication and coordination.
